

New version also for the Database Editor Magma!

We recommend that you install and possibly use it in a folder different from that of Magma Magic Machine (copy and then add the file to be edited Magic.mdb), because it is a beta version might alter the official database of magma.

If you want to collaborate in the drafting of the Manual of MADE, please contact us via the forum.

Our thanks to all those people who've contributed bug reports and code fixes.
